

LOUVRELITE® RHS LOUVRE SYSTEM

MODULAR LOUVRE SYSTEM FOR ARCHITECTURAL DESIGN

The Louvrelite® RHS Louvre System is designed to create a range of bespoke solutions on the exterior of single and multilevel buildings for either functional or aesthetic purposes.

RHS can be installed for shade and privacy, or as a pergola, entranceway, or decorative façade design. It is also available with some balustrade options.

LOUVRELITE® RHS LOUVRE SYSTEM

With Louvrelite® RHS, the Louvre designs can span multiple levels to act as both a creative feature and a full-height balustrade system.

Designed around versatility, the system can be used in a wide variety of ways, including aesthetic constructs such as gables, privacy screens, and passive shade control.

Louvrelite® Architectural Louvres are assembled in a way that allows for maximum creativity for design and enables architects and homeowners to realise their dream home concepts.
